

Vanguard Instruments Company, Inc.

CT-3500

The CT-3500 is Vanguard's second generation, stand-alone, digital, microprocessor-controlled, circuit-breaker timer. It measures the elapsed time from the instant a breaker coil is energized to the instant of opening or closing of a circuit-breaker's dry contacts. In addition to timing a breaker's contact response time, the CT-3500 can also time relays or other switching functions that use an initiating trigger voltage (24-300 Volts DC or AC).

The CT-3500 was preceded by the CT-3000 which was introduced in 1992. Over 200 units were sold world-wide. The CT-3500 has been in production since 2001, and over 400 units have been sold world-wide.
